
After user clicks "Bike" button in ActionBar;

Same should be for "Station" button

#1 - it shows expandable list when typing the letters;

- when user simply press OK on keyboard he/she will be thrown to screen 02_list_bike_stations that matches his/her input typed;
- when user presses the object on expandable list, he/she will be put directly to the bike / station screen

Comment:

metody:

- getStationsAround(userX, userY, radius)
  - return:
  - wysylam: x, y, ile stacji
  - array of Objejt
    - nr Station
    - name
    - nr of Bikes()
- synchronizacja nazw
- getStationAruond() - dodać guzik
- getNamesIdsOfStations()
  - return -> tablica PAR
  -
- drugie list View z wiadomościami po 2,3 wiadomości dla stacji
-

Messages from stations around:

ul. Waryńskiego - ul. Nowowiejska,
Inf: Bardzo piękny dzień, jest super!
Log: Będę za 15 min na 6364!

Returns stations that match the query typed into Search Bar.

If it was left empty, all stations are listed using an alphabetical (??) order

#1:
I guess we can computate it easily on server for a given geolocation of user

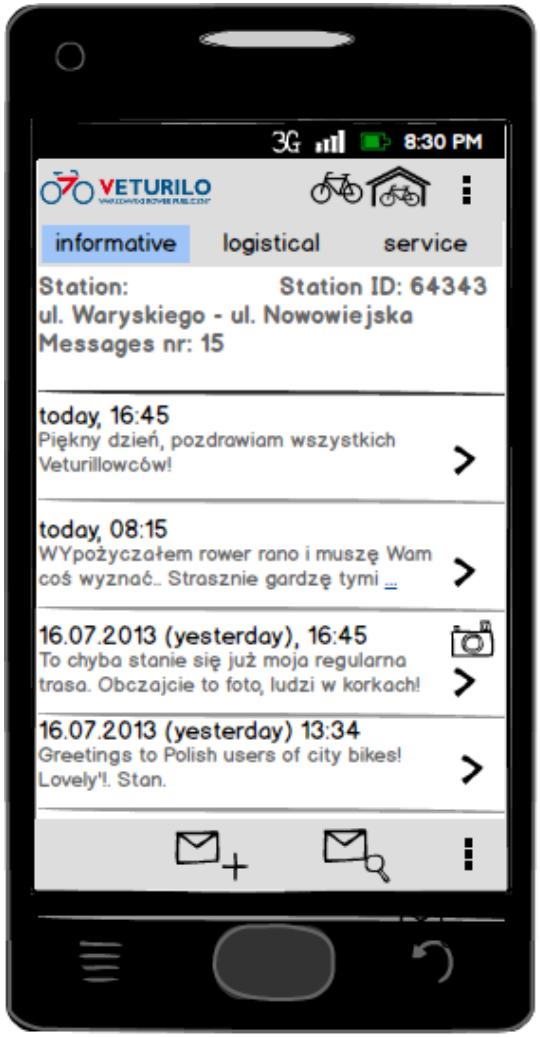
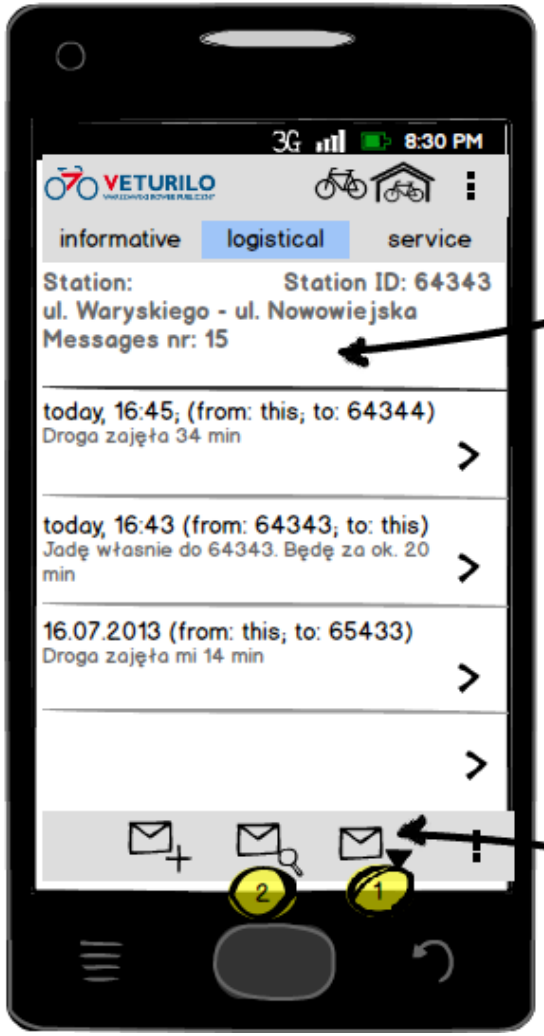
8:30 PM
VETURILO
Bikes found:
69545
Condition: OK (no service msgs)
69333
Condition: not right (2 service msgs)





This has to be discussed...

#1 - opens a list what lets you pre-select different types of messages

#2 - after press, the search text field shows un in the top actionBar and seearch is performed (in prototype) among the downloaded

Show times between ☑
Show people on route to here ☑

Piękny rower, miałem na nim 3.5 promila xD
today, 08:15
WYpożyczałem rower rano i muszę Wam coś wyznać.. Strasznie ...
16.07.2013 (yesterday), 16:45
Oprócz tego, że zgubiłem reklamę Tymbarku to świetna zabawa ;)

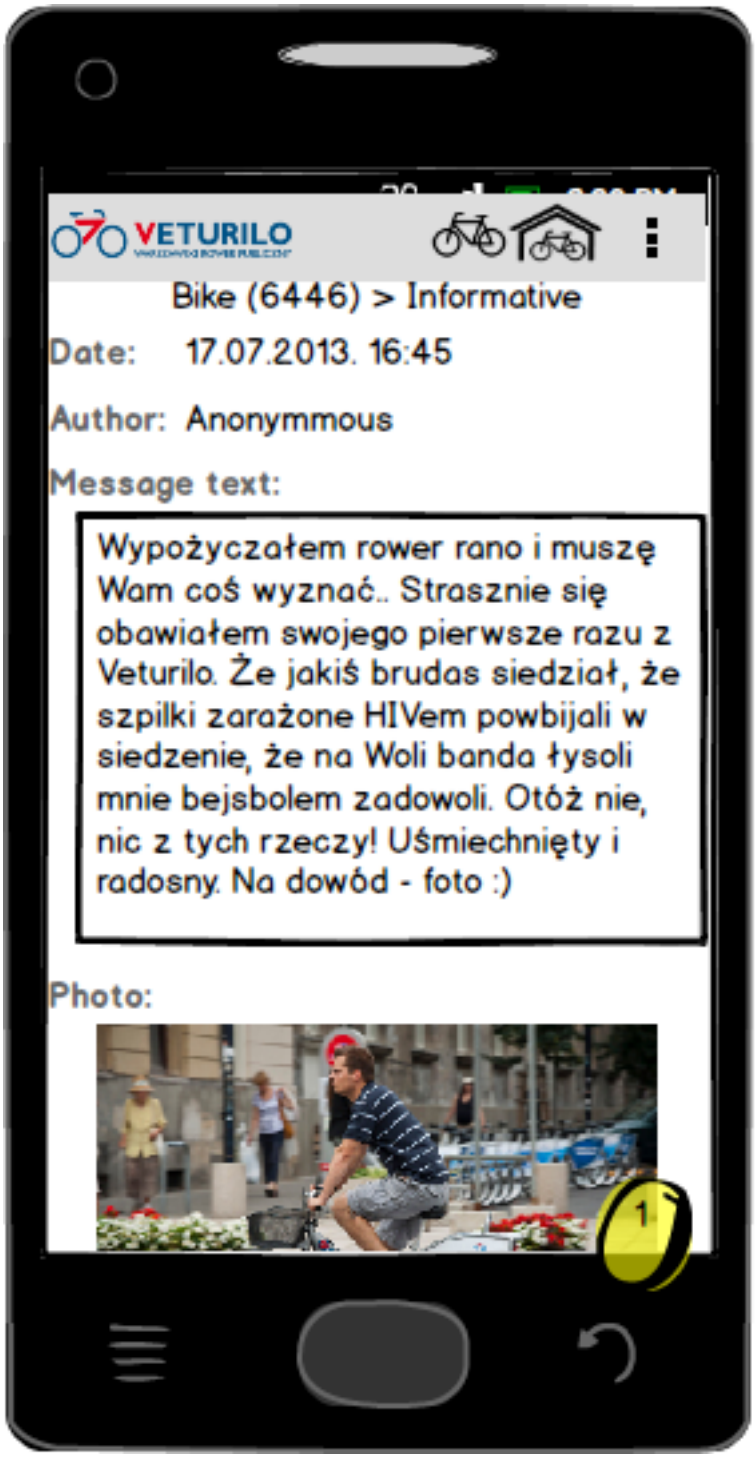
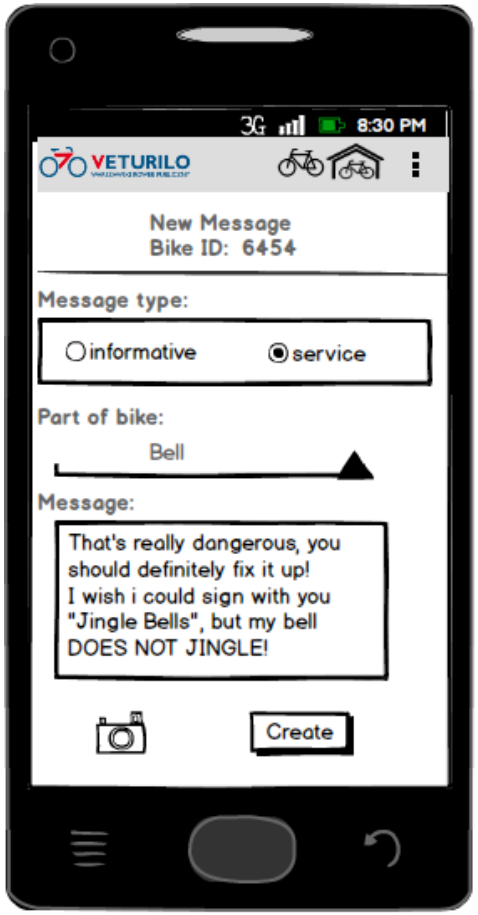
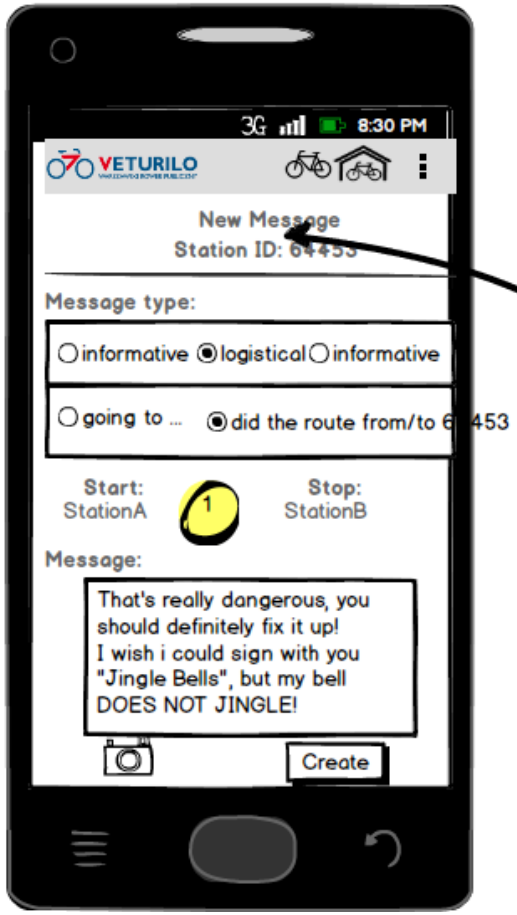
Omal że nei wpadłe pod tramwaj, NAPRAWCIE ŚWIATŁOOOO!!!!
16.07.2013
Droga zajęła mi 14 min... ...a mogłaby 5, gdyby nie FLAK!!!



#1 when pressed - goes full-screen





maybe just one drop-down list (spinner) containng all pairs of message type and subtypes (logisitcalgoing_to, logistical-did_the_route)
?

#1 - StationA and StationB should be clickagle and they should invoke an Activity / Fragment for result;
Or actually it's better if they only invoke some Dialog with Search - they should let user choose the name of station from all the names
